

§ 179.300-3 Type and general requirements.

- (a) Tanks built under this specification shall be cylindrical, circular in cross section, and shall have heads of approved design. All openings shall be located in the heads.
- (b) Each tank shall have a water capacity of at least 1500 pounds and not more than 2600 pounds.
- (c) For tanks made in foreign countries, a chemical analysis of materials and all tests as specified shall be carried out within the limits of the United States under the supervision of a competent and impartial inspector.
